

SAI DINESH M

Hyderabad, India | +91 9704951643 | saidineshm24@gmail.com | linkedin.com/in/m-sai-dinesh | github.com/m-sai-dinesh | sai-dinesh.dev

Education

VNR Vignana Jyothi Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering (CGPA: 9.15/10)

Hyderabad, India

2024 – 2028

Technical Skills

Languages: Java, C++, JavaScript, Python, C, SQL

Backend & Databases: Node.js, Express.js, REST APIs, Firebase Cloud Functions, MongoDB, PostgreSQL, Mongoose ODM

Frontend Development: React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Cloud & Tools: Git, GitHub, Docker, Postman, Vercel, Render, Firebase, Cloudinary, Linux

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS

Experience

Machine Learning Intern

[July 2026 - August 2026]

DRDO

[Remote]

- Designed and developed the UI for video upload and the end-to-end processing pipeline of an ML-based video de-weathering system, partially removing rain, smog, and smoke effects while preserving original video quality and color fidelity.
- Performed hyperparameter and architecture-level optimization (blend-strength tuning, residual blocks, channel width) to balance de-weathering quality against inference speed, matching SOTA benchmarks.
- Optimized the trained model for deployment via quantization, pruning, and knowledge distillation techniques, reducing server-side computational load during edge deployment.

Software Development Intern

March 2026 – July 2026

Smart Resume Tailor

Remote

- Architected a serverless resume tailoring platform using Firebase Cloud Functions and Gemini AI API, benchmarking model token consumption and response latency across GPT-4o-mini and DeepSeek V3.
- Engineered a Chrome Extension with a multi-step agent pipeline (regex extraction to LLM batch mapping) to auto-fill job application forms by parsing live job descriptions against profile data.
- Built secure backend proxying with JWT-based authentication to eliminate frontend API key exposure and configured CORS support across multiple deployment origins.

Projects

BranchIQ – Bank Branch Load & Queue Optimization | *Python, Sarvam AI, Gemini AI API*

[GitHub](#)

- Built an AI system to forecast branch footfall and service demand, identifying peak periods and potential overload windows from queue and service data (TCS Hackathon project).
- Analyzed queue data, service types, staff availability, and wait times with Gemini AI to detect operational bottlenecks and recommend optimal staff allocation and customer redirection.
- Integrated Sarvam AI for voice interaction and Gemini AI for decision-making, helping branch managers make data-driven calls to improve service quality and cut customer wait times.

GymBuddy AI Platform | *Python, React, MediaPipe, OpenCV, GitHub Actions*

- Developed a full-stack fitness application integrated with a computer vision pipeline (MediaPipe, OpenCV) that processes 33+ body keypoints for real-time form validation and rep tracking.
- Built RESTful APIs in Python and React for user authentication, workout analytics, and progress tracking dashboards.
- Set up CI/CD automation pipelines via GitHub Actions for automated unit testing and deployment, reducing release cycle duration by 40%.

Competitive Programming & Achievements

Competitive Programming: LeetCode Max Rating: 1744 | CodeChef Rating: 1446 (350+ Algorithmic Problems Solved).

Innovathon Finalist: Reached national finals by architecting and delivering a fully functional web prototype in 24 hours.

Smart India Hackathon (SIH): College Level Qualifier – Selected among top teams for national problem-solving challenge.

TCS Tech Fest: Winner.
